

IBM Case Foundation 5.2.1 Administration

F247
Course Abstract

Course description

This course is for anyone who is responsible for day-to-day operations of a production IBM Case Foundation workflow application. You work with an IBM Case Foundation system to practice and complete workflow system administration tasks.

This course is comprised of the following units:

- F231– IBM Case Foundation 5.2.1: Configure the workflow system
- F232 – IBM Case Foundation 5.2.1: Security
- F233 – IBM Case Foundation 5.2.1: Maintain the Workflow System
- F234 – IBM Case Foundation 5.2.1: Manage Work in Progress
- F236 – IBM Case Foundation 5.2.1: Component Integration

Duration

4 days

Delivery Method

Instructor-led (Classroom), Instructor-led Online

Audience

- A Workflow System Administrator is responsible for day-to-day operations of a production IBM Case Foundation workflow application.
- A Workflow System Administrator is typically required to help workflow participants to do the following tasks:
 - Locate work and complete workflows.
 - Respond to management decisions that require changes to work items.
 - Gather information about workflow activity to help management make business decisions.
- During the production phase, the Workflow System Administrator manages operation of the workflow application and communicates with users and managers. In the workflow application deployment phase, the Workflow System Administrator coordinates activities with the Workflow Author to plan and control workflow application implementation into the production environment.

Prerequisites

- Familiarity with Windows 2008 operating systems.
- Familiarity with Java and Java Virtual Machines.
- General knowledge of relational database management systems.

- General knowledge of P8 Platform security concepts.
- General workflow terminology:
 - Workflow
 - Workflow definitions
 - Queues
 - Rosters.
- Start a P8 Platform system.
- Familiarity with P8 Platform administration interfaces, including:
 - Administration Console for Content Platform Engine
 - IBM Content Navigator

Recommended training path:

- F230 IBM Case Foundation 5.2.1: Introduction
- F247 IBM Case Foundation 5.2.1: Administration

Course Objectives

Upon completion of this course, participants will be able to:

- Configure the workflow system
 - Identify the components of a workflow system.
 - Create and configure a workflow system to support FileNet workflow applications.
 - Create and configure an isolated region.
 - Create a connection point and isolated region.
 - Create isolated region objects.
 - Expose data fields.
 - Define indexes for queues and rosters.
 - Create and configure in-baskets and roles.
 - Configure Content Navigator for workflow.
 - Configure a web application and step processor.
- Security
 - Inspect workflow system security settings.
 - Add users and groups to a workflow system.
 - Identify and resolve security issues.
- Maintain the Workflow System
 - Use administrative tools for maintenance
 - Monitor with the Process Services Ping page
 - Monitor with System Dashboard
 - Monitor with vwtool
 - Maintain event logs
- Manage Work in Progress
 - Use Case Foundation tools to search for work with basic and advanced search criteria.
 - Modify work items.

- Process and manage work.
- Manage a workflow exception.
- Component Integration
 - Understand the purpose of component integration in workflow applications.
 - Understand the architecture of the Component Manager Frameworks.
 - Understand what component queues provide.
 - Create and configure a Java component.
 - Monitor and maintain component queues.

Topics

Configure the workflow system

Workflow system concepts

What is a workflow system?

What is the purpose of a workflow system?

Workflow system components

Connection points

Isolated regions

Understand a workflow system and its function.

Identify the components of a workflow system.

Create and configure a workflow system to support FileNet workflow applications.

General properties of a workflow system

Runtime Options

Language Packs

Web Applications

DbExecute Connections

Remote Servers

Isolated Regions

Fine-tuning the workflow system

Create and configure an isolated region.

Create a connection point and isolated region.

Create isolated region objects.

Create and configure Queues.

Create and configure Rosters.

Create and configure Event logs.

Create and configure Application Spaces.

Expose data fields.

Expose data fields to queues and event logs.

Define indexes for queues and rosters.

Create an index.

Configure queues and event logs to use the index.

Create and configure in-baskets and roles.

Create and configure an in-basket.

Create roles.

Add in-baskets and members to roles.

Configure Content Navigator for workflow.

Create a desktop.

Create a repository for the connection point.

Configure the desktop for workflow.

Configure the desktop to open Process Designer and Process Tracker.

Configure a web application and step processor.

Configure a web application.

Deploy a step processor.

Configure a step processor.

Security

Security overview

Layers of security

Object store security

Isolated region security

Workflow system security groups

In-baskets

Application spaces

Roles

Avoid security conflicts

Security configuration

About isolated region security

Control access to queues

Control access to rosters

Control access to rosters: recommended practice

Roster and queue security settings

How to configure queue and roster security

Maintain the Workflow System

Use administrative tools for maintenance

Maintaining a workflow system

Administrative tools for the Workflow system

Administration Console for Content Platform Engine

Lock an isolated region

Workflow system component administration

Process Administrator

Start Process Administrator

Process Services Ping page

System Dashboard

vwtool

Logging systems

Monitor with the Process Services Ping page

Process Services Ping Page

Process Services Ping Page: Overview

Process Services Ping Page: URL

Ping Page: Log file location

Ping page: Helpful links

Sample: API Stats

Monitor with System Dashboard

What is System Dashboard?

Why use System Dashboard?

Dashboard Terms (1)

Dashboard Terms (2)

System Dashboard Structure

Create clusters to view data

Use the Dashboard views

Execute options for Listener node and view data

Archiving Manager

Configuration Guidelines

Process counters to watch (examples)

Monitor with vwtool

Use vwtool to monitor an isolated region

Start vwtool

Obtain status information on workflow system

Run loadstatus

Report memory usage, database usage

Report version and system configuration

Maintain event logs

Event tools

Event architecture1

About event logging

View event logs

View events with New Workflow Search

- View events with Process Administrator
- Event log maintenance guidelines
- Select event log options
- PELog

Troubleshoot the workflow system

- Troubleshooting overview
- Support resources
- Collecting data
- For Process Clients issues: fnlog4j.properties
- Fnlog4j concepts
- Enable fnlog4j
- Two trace methods both use log4j
- vwtool trace log options

Manage Work in Progress

Search for work

- Process Administrator
- Search options
- Viewing workflows and work items
- View and customize search results
- Ways to refine a search for work
- Use exposed fields in searches
- Use the Criteria tab to filter a search
- Search user queues
- View workflow history in Process Tracker

Modify work

- Reasons to modify work
- Tools for modifying work
- Work item status
- Locking work
- About workflow properties
- Modify data field values
- Modify workflow groups
- Open workflow or work item in Process Tracker
- Modify an attachment reference
- Considerations for modifying work

Process and manage work

- Tools for processing and managing work
- Ways to complete work items
- Assign or reassign work to participants

- Terminate work
- Delete work
- Designate a substitute participant
- Unlock work
- Add and remove trackers

Manage workflow exceptions

- About workflow exceptions
- Conductor queue
- Get information about workflow exceptions
- View the information stack
- Modify workflows and work items

Component Integration

Component integration concepts

- Purpose of component integration
- Component integrator
- Component Manager Frameworks
- Deciding on a Component Manager Framework
- Component behavior
- Types of components
- Java adapter
- JMS adapter

Create and configure component queues

- How to create and configure component queue
- Procedure: Create and configure a component queue
- Create a code module
- New Component Queue wizard
- Adapter properties
- JAAS credentials
- Configure the Java Message Service adapter
- What is a queue operation?
- Elements of an operation
- Operation parameters
- Import Java component queue operations
- Define JMS component queue operations
- Stopping and starting component queues
- Diagnosing Component Manager issues

Appendix

- Appendix A. Start and Stop System Components
- Appendix B. Solutions to exercises

Appendix C. Checkpoint solutions

Appendix D. Checkpoint solutions

Appendix E. Solutions to exercises

Appendix F. Troubleshooting
