About this document

This document contains information about issues that were encountered during deliveries of this course. These issues will be addressed in subsequent updates of the material.

You should review this document before the start of class, and use this list as the first point of reference if issues arise.

Lab Setup Guide items

None reported.

Student Exercises Guide items

Exercise 6: Part 4, Define a business process

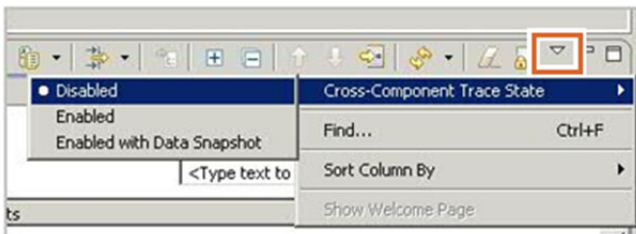

The screen capture in Exercise 6, page 6-22 does not match your lab because the server logs view has cross-component trace enabled.

To see the correct logs view, do the following:

Before running the test in step 9 (Test the AccountVerification BPEL process) on page 6-20, disable cross-component trace by first clicking the **View Menu** icon in the Server Logs view toolbar.

Next, click **Cross-Component Trace State > Disabled**.

Exercise 11: Part 1, Creation mediation services

The mediation module test towards the end of the exercise shows an error if the map type in the InputOutput XML Map is set to **Business Object Map**. On Step 9a on page 11-22, the output will be incorrect if you follow the lab instructions.

To make the exercise work successfully, make sure that the **Target engine** is set to **XSLT 1.0** and that you save any changes.

In step 6 of Part 2: "Define an XML data map," you explore the supported transforms. As instructed in step 6f, make sure that you select **XSLT 1.0** as the Target engine type. However, in step 7 of Part 2 on page 11-13, you are instructed to close the map editor without saving any changes. If you do not save your changes, then the Target engine remains at the Business Object Map, which produces errors at the end of this process.

Important:

- Make sure that you **save** your changes.
- Make sure that the Target engine is set to **XSLT 1.0** and *not* to Business Object Map.

These steps confirm that the mediation test that you run later will be successful.

Student Notebook items
